

What is claimed is:

1. A washing method comprising:

a nonaqueous washing process of washing an object to be washed using

5 a nonaqueous solution;

an intermediate washing process of washing the object to be washed
using a solution having solubility relative to both an aqueous solution and the
nonaqueous solution after said nonaqueous washing process; and

an aqueous washing process of washing the object to be washed with the
10 aqueous solution after said intermediate washing process.

2. A washing method as claimed in claim 1, further comprising:

a drying process of drying the object to be washed between said
nonaqueous washing process and said intermediate washing process.

3. A washing method as claimed in claim 2, wherein the drying

process is performed by using a vapor of the solution having solubility relative to
both an aqueous solution and the nonaqueous solution.

4. A washing method as claimed in claim 1, further comprising:

a drying process of drying the object to be washed between said
intermediate washing process and said aqueous washing process.

5. A washing method as claimed in claim 4, wherein the drying

process is performed by using a vapor of the solution having solubility relative to
both an aqueous solution and the nonaqueous solution.

6. A washing method as claimed in claim 1, wherein the solution

having solubility relative to both an aqueous solution and the nonaqueous
30 solution in the intermediate washing process is a hydrocarbon solution.

7. A washing method as claimed in claim 6, wherein the hydrocarbon solution is alcohol.

8. A washing method as claimed in claim 7, wherein the hydrocarbon solution is isopropyl alcohol.

9. A washing method as claimed in claim 6, wherein the hydrocarbon solution is ketone.

10. A washing method as claimed in claim 9, wherein the hydrocarbon solution is acetone.

11. A washing method as claimed in claim 1, wherein ultrasonic vibration is applied during the washing performed in said nonaqueous washing process.

12. A washing method as claimed in claim 1, wherein ultrasonic vibration is applied during the washing performed in said intermediate washing process.

13. A washing method as claimed in claim 1, wherein ultrasonic vibration is applied during the washing performed in said aqueous washing process.

14. A washing method as claimed in claim 1, wherein the object to be washed are optical components.

15. A washing method comprising:
a nonaqueous washing process of washing an object to be washed using

a nonaqueous solution;

an intermediate washing and drying process of simultaneously washing and drying the object to be washed using a solution having solubility relative to both an aqueous solution and the nonaqueous solution after said nonaqueous

5 washing process; and

an aqueous washing process of washing the object to be washed with the aqueous solution after said intermediate washing process.

16. A washing method as claimed in claim 15, wherein the
10 intermediate washing and drying process is performed by using a vapor of the solution having solubility relative to both an aqueous solution and the nonaqueous solution.

17. A washing method as claimed in claim 15, wherein the solution
15 having solubility relative to both an aqueous solution and the nonaqueous solution in the intermediate washing process is a hydrocarbon solution.

18. A washing method as claimed in claim 16, wherein the object to be washed are optical components.
